SUMMARY

Computer Science graduate skilled in AI Engineering and software development, building multi-agent LLM systems and production-ready applications with Python.

EDUCATION

SR University – Warangal, B.Tech in Computer Science & Engineering — Nov 2022 – May 2026

- CGPA: 8.4
- **Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Object Oriented Programming (Java, Python), Machine Learning

Narayana Jr College, Intermediate in Physics, Chemistry, & Mathematics — May 2022

- Marks: 965/1000 (96.5%)

EXPERIENCE

Agentic AI Intern – Virtusa Consulting Services (Certificate) — March 2026 – May 2026

- Built and debugged Python microservices and REST APIs for Generative AI-driven automation workflows, applying object-oriented design principles within Agile sprints and Git-based CI/CD pipelines to ship fixes to production.
- Queried and integrated SQL databases to support AI agent backend automation, troubleshooting integration issues cross-functionally with engineering teams.

Summer Research Intern – NIT Warangal (Certificate) — June 2024 – July 2024

- Deployed a real-time disease-prediction web app and Telegram bot backend built with Python, REST APIs, SQL, and a machine learning model, serving 200+ users in a live healthcare setting.
- Built Power BI dashboards to analyze prediction trends and debug data pipeline issues – learning Power BI independently on the job to inform follow-up model tuning.

TECHNICAL SKILLS

AI & GenAI: LangGraph, LangChain, RAG, Prompt Engineering, TensorFlow, Scikit-learn, XGBoost

Web & Backend: Python, Java, Flask, React, REST APIs

Databases: SQL, MongoDB, Docker

Tools: Git, GitHub, Unit Testing, Debugging, Automation

PROJECTS

Dynamic IT Operations Orchestrator | Agentic AI & Distributed Systems (GitHub) March 2026

- Built an event-driven AI Agent system in Python and REST APIs that monitors distributed cloud infrastructure on AWS, applying algorithmic anomaly-detection logic to auto-trigger self-healing workflows and cut manual intervention.

Stelos: Maintenance Intelligence Platform | Tata Steel AI Hackathon 2026 (GitHub) June 2026

- Architected a 9-agent LangGraph backend implementing Retrieval-Augmented Generation (RAG) with FAISS and LLM-powered agents over Flask/FastAPI REST APIs for predictive maintenance, using a machine learning (XGBoost) model with a human-in-the-loop validation layer.

AstraGov AI | Canara Bank SuRaksha Cyber Hackathon 2.0 (GitHub) June 2026

- Designed a 5-agent AI Agent backend (LangChain, CrewAI) with Flask REST APIs and MongoDB, paired with a full-stack JavaScript/TypeScript frontend (Next.js, Redux, Tailwind CSS, WebSockets), coordinating LLM-driven agents for autonomous banking compliance and risk monitoring.

CERTIFICATIONS

Microsoft Certified: Fabric Data Engineer Associate (Verify) September 2026
Oracle Cloud Infrastructure Certified AI Foundations Associate (Verify) August 2026
Oracle Certified Foundations Associate, Agentic AI (Verify) July 2026
Python Essentials, Cisco Networking Academy (Verify) June 2025
